

INCIDENT RESPONSE

powering Clone Guard® Security Consulting

Gain instant access to critical security expertise and technology to rapidly respond to and remediate a security incident and develop an incident response plan with Clone Systems' **Incident Response**

Prepares your organization and Computer Security Incident Response Team (CSIRT) to respond quickly and effectively to a security incident when needed

- ✓ **Retainer-based Incident Response resources** to ensure the availability of security experts to work with your internal teams and respond to security incidents
- ✓ **Proactive development of an Incident Response Plan** that clearly details roles and responsibilities, procedures, communication plans and other key elements for addressing the most sophisticated of security threats

Reduces the cost of a security breach to your organization by promptly responding to a security incident and limiting the damage and recovery efforts

- ✓ **A comprehensive suite of enterprise investigation tools and technologies** used to quickly search your network for evidence of attacker activity
- ✓ **An expert team of security engineers with extensive experience investigating breaches** of all sizes and across many industries

Develop remediation plans that eliminate the security threats from your environment and identify security controls that reduce the likelihood of a re-compromise

- ✓ **Evidence collected through forensically sound procedures** and handled in a manner consistent with law enforcement standards
- ✓ **Detailed investigative reports that analyze the security incident** and address the needs of multiple audiences both internal and external to your organization
