

# LOG MANAGEMENT

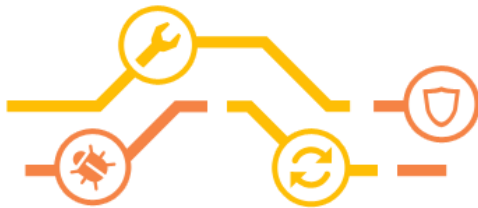

powering Clone Guard® Security Monitoring

Aggregate and quickly analyze your essential security logs with Clone Systems' **Log Management**

Allows you to quickly and easily review logs to find vulnerabilities and troubleshoot your network

- ✓ **Log collection and storage** with powerful parsing, classifying, and categorizing capabilities to allow you to easily identify vulnerabilities in your environment and capable of scaling as you grow
- ✓ **Real-time search and analysis capabilities** streamlining your ability to troubleshoot and perform postmortem analysis and forensic investigations

Empowers you with a holistic view of security events across your entire network, helps to quickly identify key areas that need urgent attention, and facilitates troubleshooting and resolution

- ✓ **Monitoring and Alerting** to identify traffic that requires further investigation with your team
- ✓ **Security Operation Center** monitoring your security environment, triaging and escalating alerts, and providing guidance where needed 24/7/365

With enhanced visibility and access to relevant log information you can expedite troubleshooting, remediation, compliance and audit requirements

- ✓ **Maintain compliance** with industry standards and regulations
- ✓ **Detailed reporting** of all security related logs for any device and endpoint on your network

\*Security Information and Event Management (SIEM) Correlation available as an additional service
